

A B S T R A C T

A FLUID DISPENSER HEAD

5 A fluid dispenser head comprising a fluid duct ((73,
61) and a dispenser orifice (83) from which the user can
draw the dispensed fluid, said head further comprising
closure means (9; 9') for selectively closing the
dispenser orifice (83), said closure means comprising a
10 closure member (93) that is displaceable between a closed
position and an open position, the head further
comprising a non-rotary portion (6) that is prevented
from turning relative to the dispenser member (4), and a
rotary portion (7, 8) that can be turned relative to the
15 non-rotary portion (6), said head further comprising
displacement means (69; 69') that are capable of
displacing the closure member (93; 93') between the
closed and open positions while the rotary portion (7, 8)
is being turned relative to the non-rotary portion (6).
